/PREDICT

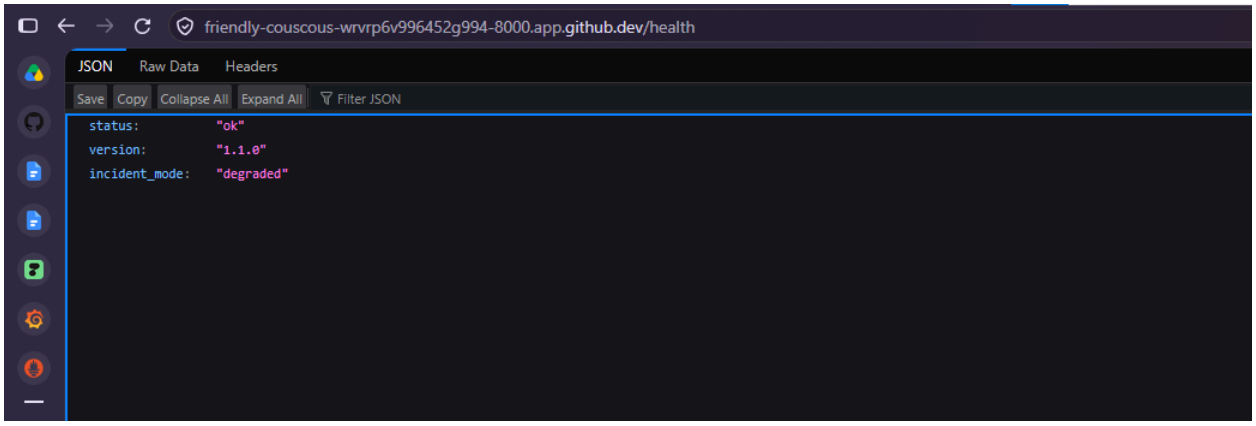

EVIDENCIA 3

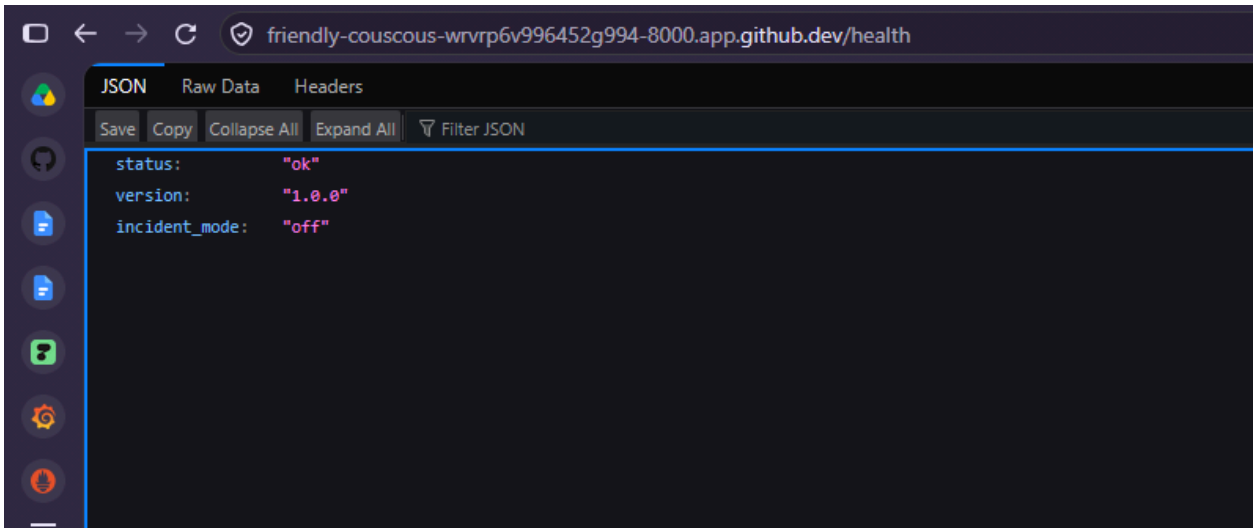

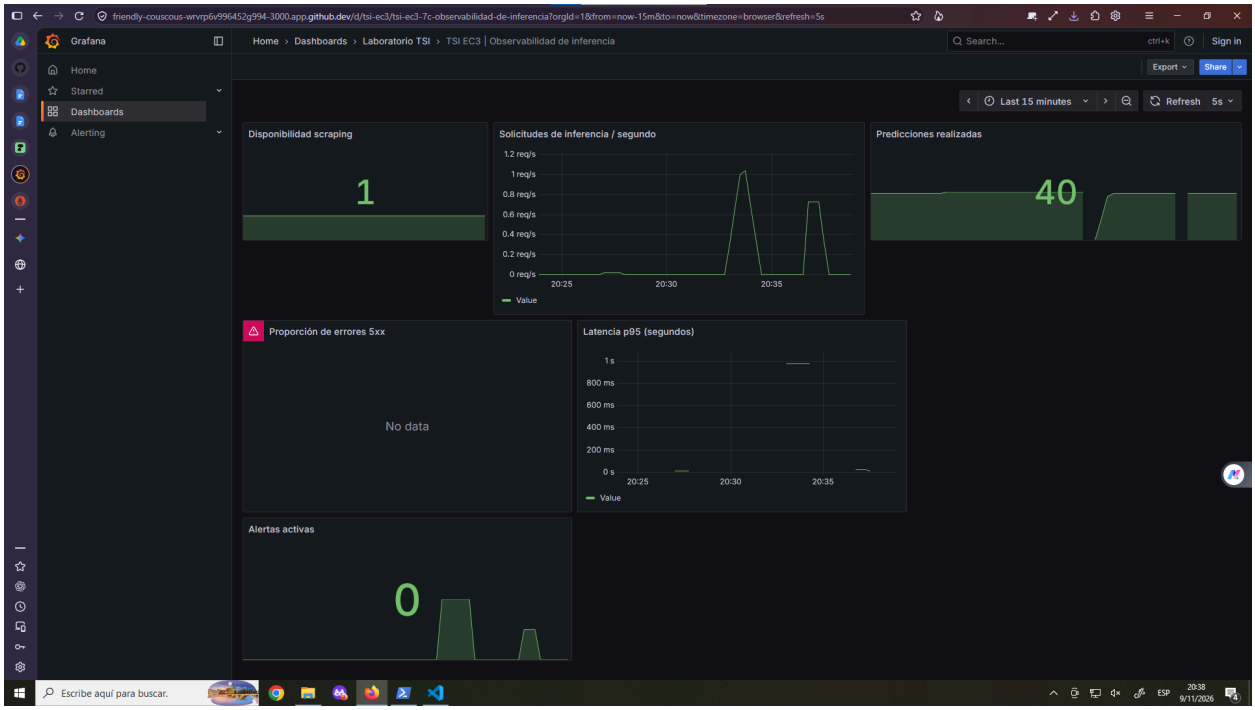

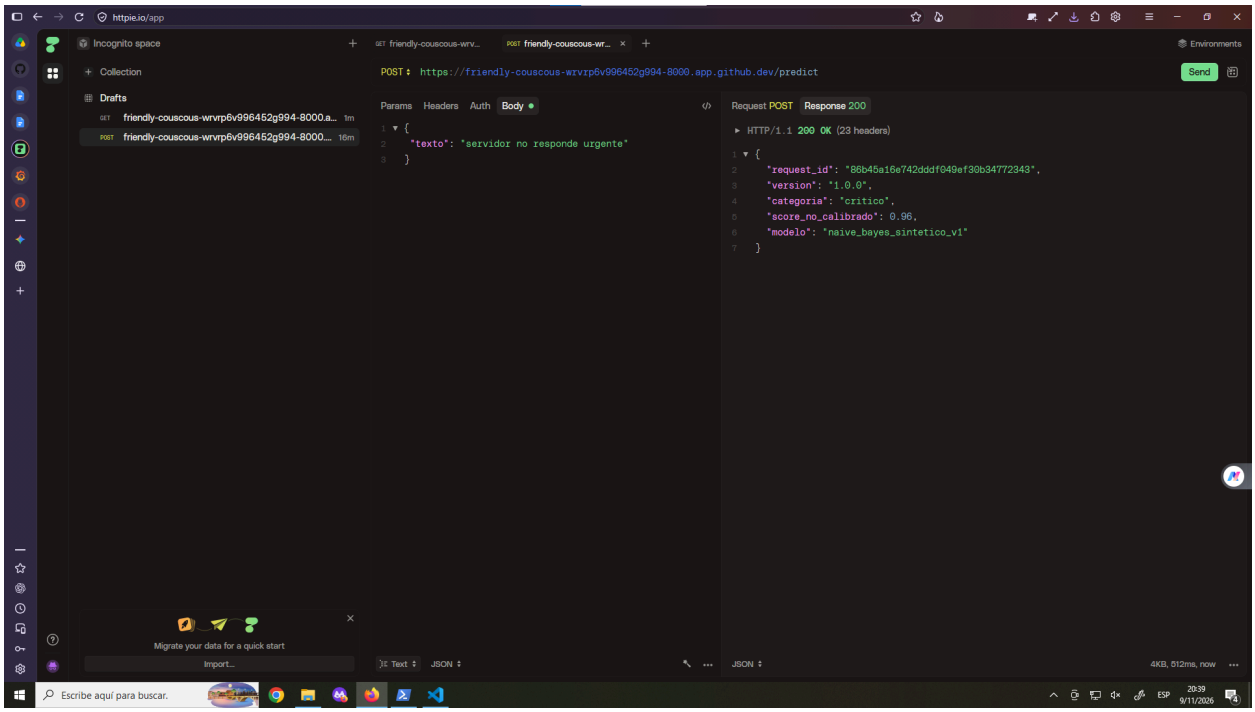

Respuesta a pregunta: Mientras que las métricas indican qué está pasando mediante valores numéricos agregados a lo largo del tiempo, los logs explican por qué está pasando registrando eventos detallados y contextuales de lo que ocurrió en un momento específico.

Respuesta a pregunta: El rollback de snapshot revierte instantáneamente la VM a un estado anterior usando cambios locales (para pruebas rápidas), mientras que la restauración de imagen reconstruye la VM desde una copia de seguridad externa (para recuperarse ante fallos graves del almacenamiento).
